INTERIOR DESIGN

DESIGN PORTFOLIO

Jasmine Mak

JASMINE MAK

Interior design is the discipline of shaping human experience through space. I am driven by the belief that environments directly influence how people think, feel, and perform. Thoughtful design has the power to elevate everyday life.

My work is grounded in strong conceptual frameworks and carried through with technical precision. I approach each project with clarity of intent, disciplined material selection, and careful spatial logic. I am particularly drawn to human-centred design, workplace strategy, and the integration of wellness within commercial environments.

Design, for me, is an ongoing pursuit of refinement. I am committed to continuously evolving my craft, strengthening my technical fluency, and producing work that is both meaningful and meticulously considered.

Education

Honours Bachelor of Interior Design
Georgian College: Barrie, ON
Expected Graduation: 2027

Relevant Focus Areas:
- Workplace Strategy & Environmental Psychology
- Lighting Design & Technical Systems
- Sustainable Material Applications
- Commercial Budgeting & Project Planning
- Barrier-Free & Code-Compliant Design

Proficiencies

Software
- Revit
- AutoCAD
- SketchUp
- Twinmotion
- Adobe InDesign
- Adobe Photoshop
- Enscape
- Microsoft Excel

Technical
- Construction Documentation
- Space Planning
- Lighting Analysis
- Finish & Material Specification
- Budget Development
- Rendering & Visualization
- Code Research (OBC, Accessibility Standards)

Design Skills

- Concept Development & Narrative Building
- Human-Centered & Evidence-Based Design
- Biophilic & Wellness Integration
- Workplace & Commercial Strategy
- Furniture & Product Conceptualization
- Circadian Lighting Strategy
- Material Storytelling
- Graphic & Presentation Layout

Personal Skills

- Project Leadership
- Clear Communication
- Critical Thinking
- Adaptability Under Constraints
- Detail-Oriented Execution
- Collaborative Teamwork
- Time Management
- Strategic Decision-Making

RESIDENTIAL: LIVE WORK CONDO

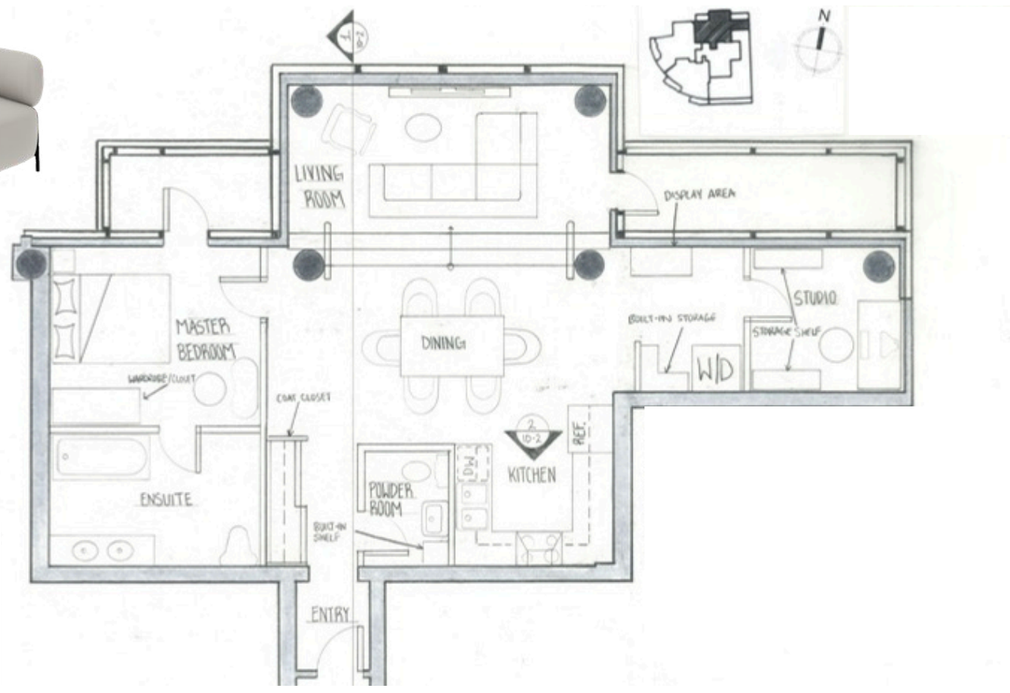

This project explores the design of a contemporary live-work condominium developed entirely through hand drafting and manual rendering techniques. The project focused on building a foundational understanding of spatial planning, technical drawing, and visual communication through traditional drafting methods.

The design concept is rooted in minimalist and Scandinavian design principles, emphasizing clean lines, simplicity, and a restrained monochromatic palette of whites, blacks, and cool greys. The layout organizes living, working, and private spaces into a clear spatial sequence that supports both everyday living and creative productivity.

Hand-drawn plans, elevations, and perspective drawings were used to communicate the design. The project also incorporates research from the WELL Building Standard, exploring how natural light, indoor air quality, and mental wellness can influence residential environments. Large window openings, interior greenery, and calm material selections were used to create a living space that supports both physical comfort and psychological well-being.

RESIDENTIAL: LIVE WORK CONDO

LONGITUDINAL ELEVATION

KITCHEN ELEVATION

RESIDENTIAL: LIVE WORK CONDO

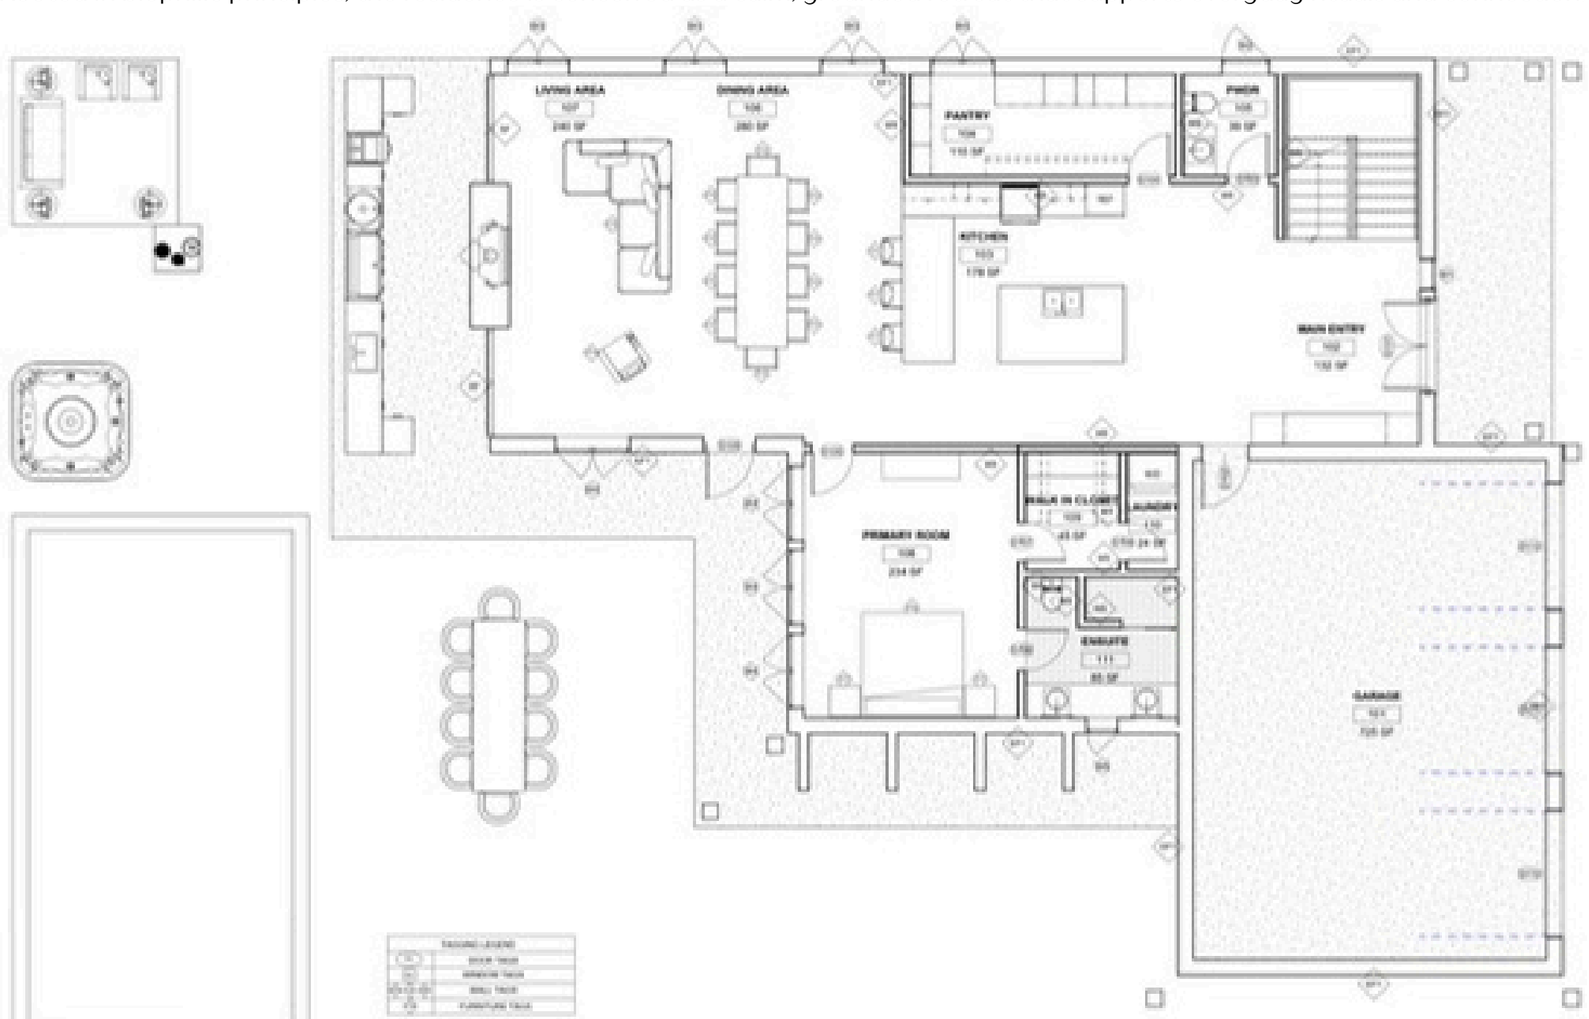

This project strengthened my ability to communicate spatial ideas through hand drafting and manual rendering. I developed a deeper understanding of how layout, light, and material restraint can shape both function and emotional experience within compact living environments.

RESIDENTIAL: LEDGER RESIDENCE

The Ledger Residence explores contemporary farmhouse living through a refined balance of warmth and restraint. Traditional architectural cues are reinterpreted through clean lines, simplified detailing, and a disciplined material palette.

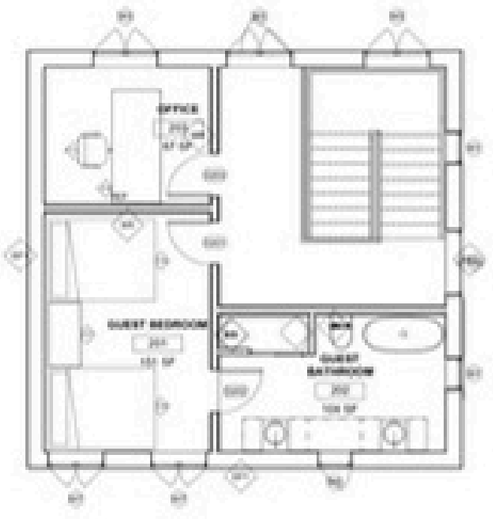

The design prioritizes openness, longevity, and connection to nature. The spatial layout supports entertaining, aging in place, and long-term comfort through thoughtful circulation and storage planning.

Rooted in biophilic principles, the residence is conceived as a calm, grounded retreat that supports everyday rituals and connection.

MAIN FLOOR PLAN

SECOND FLOOR PLAN

RESIDENTIAL: LEDGER RESIDENCE

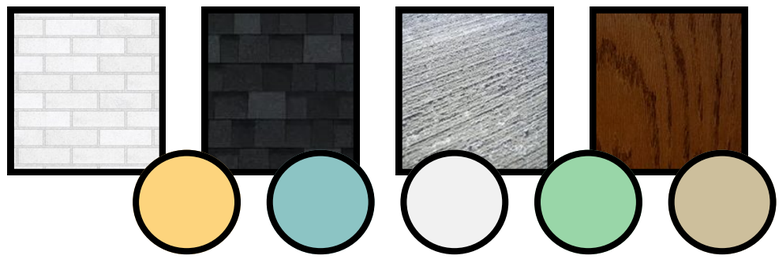

The architectural expression is defined by pitched rooflines, standing seam roofing, and a restrained composition of soft white siding and natural wood accents. Material selections were chosen for durability, low maintenance, and timeless appeal.

Outdoor living is integrated as an extension of the interior environment. Stone pavers, natural wood decking, and covered gathering areas create layered zones for entertainment and quiet retreat. The screened porch, pool, and fire pit area reinforce the home's emphasis on social connection and seasonal adaptability.

The exterior form balances structure and warmth, reinforcing the home's contemporary farmhouse identity.

"To design a freestanding sustainable structure with an emphasis on form to provide an inclusive space for healthy living."

RESIDENTIAL: LEDGER RESIDENCE

The interior palette consists of soft whites, sandy neutrals, and warm wood tones to create a cohesive and calming environment. Engineered hardwood flooring provides durability, while layered textiles introduce softness and tactile contrast.

The open concept plan seamlessly connects the kitchen, dining, and living areas to support fluid movement and social interaction. A main floor primary suite enhances accessibility, while upper level bedrooms and loft space accommodate family and guests.

Material restraint, natural light, and spatial clarity work together to produce an atmosphere that feels composed, functional, and enduring.

RESIDENTIAL: LEDGER RESIDENCE

RESIDENTIAL: LEDGER RESIDENCE

RESIDENTIAL: LEDGER RESIDENCE

RESIDENTIAL: LEDGER RESIDENCE

Through this project, I explored how residential design can balance aesthetic clarity with long-term livability. I focused on creating a home that supports both social connection and aging in place, reinforcing my ability to design with both present needs and future adaptability in mind.

RESTAURANT: OISHIMONO

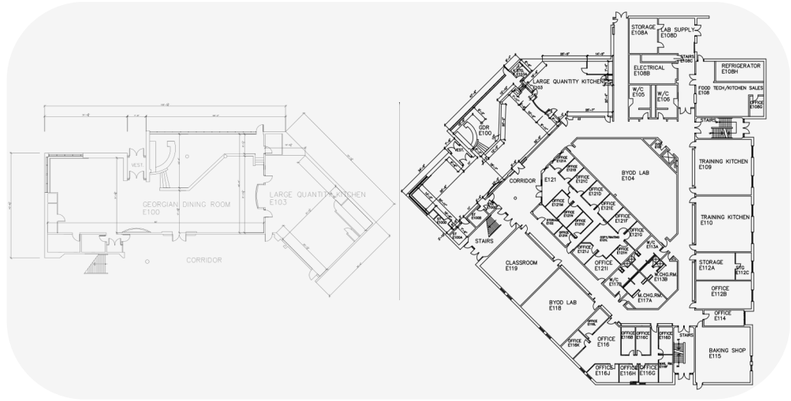

Rooted in the principles of ***Japandi and Wabi-Sabi***, the final design concept blends minimalism with warmth and imperfection with intentionality. This Japanese all-you-can-eat restaurant embraces a moody, grounded palette and natural materials to create a dining experience that feels intimate, serene, and deeply connected to the present moment.

The interior is designed to evoke ***calmness and quiet luxury***, where clean lines and organic textures work together to reflect the beauty of simplicity. Thoughtful zoning ensures an efficient layout that supports smooth service and back-of-house operations, while maintaining a sense of flow and openness throughout the dining space.

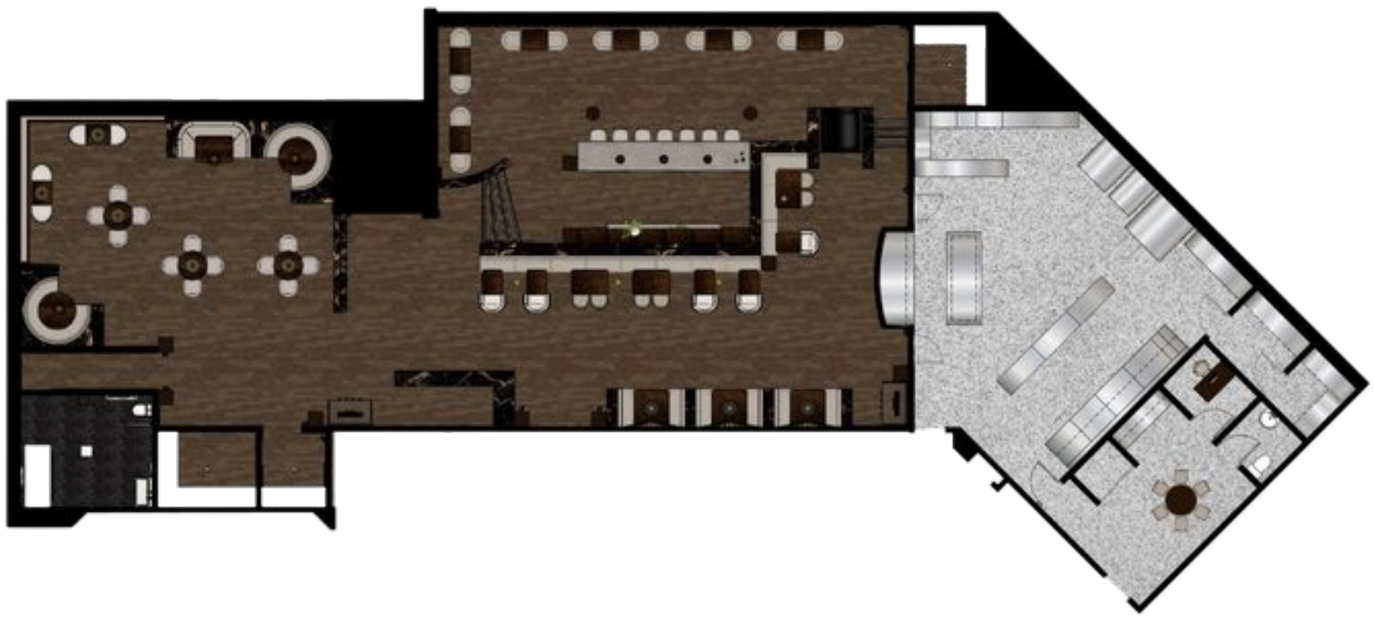

Guests are welcomed at a sculptural host stand that sets the tone, leading them into a carefully curated environment where soft lighting, raw finishes, and layered materials guide the experience.

The central dining area accommodates at least 60 patrons, offering a variety of seating options that ***promote comfort and privacy*** while maintaining visual connectivity. The bar, with seating for eight, acts as both a functional service point and a quiet ***place to pause, watch, and sip.***

This restaurant is more than a place to eat; ***it is a space of presence, ritual, and rhythm.*** The design invites guests to slow down, savour, and reconnect, honouring both the culinary craft and the atmosphere in which it's served.

RESTAURANT: OISHIMONO

A muted and earthy palette establishes warmth without visual excess. Natural woods, textured finishes, woven textiles, and diffused lighting contribute to a layered and tactile atmosphere.

Ambient lighting is intentionally soft to enhance comfort and presence. Open sightlines maintain connectivity, while private niches provide moments of retreat. Material transitions and subtle contrast reinforce spatial hierarchy without overwhelming the user.

The environment supports calm engagement, framing the culinary experience within a refined architectural setting.

RESTAURANT: OISHIMONO

This project challenged me to translate an abstract design philosophy into a cohesive spatial experience. I refined my ability to use materiality, lighting, and spatial sequencing to shape atmosphere, while also considering operational flow and user comfort in a high-occupancy environment.

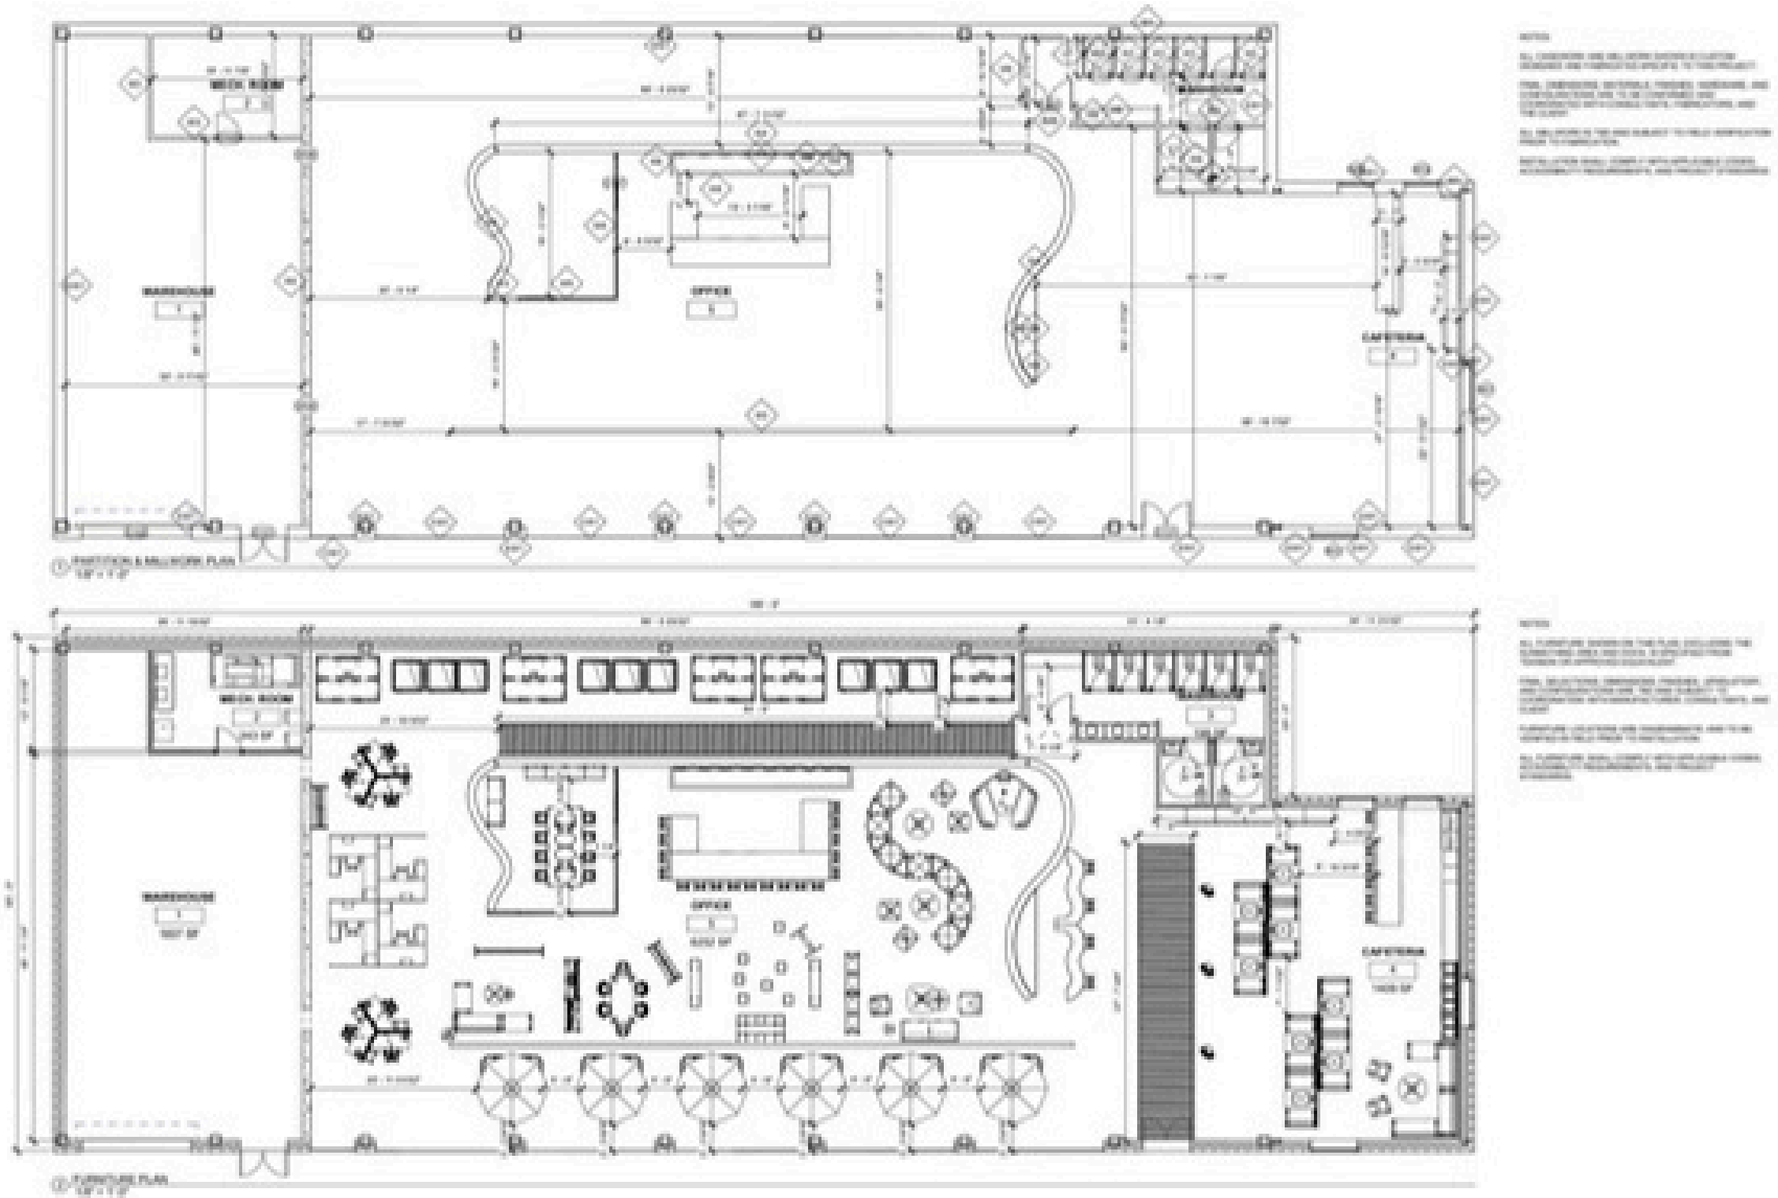

OFFICE: MODUNEST

What if the workplace felt less like an obligation and more like a renewal?

ModuNest reframes the office as a restorative destination. Inspired by the rhythm of vacation environments, the design integrates collaboration, reflection, and rejuvenation within a cohesive spatial framework.

Rather than designing solely for productivity, the project prioritizes balance. The workplace is positioned as an emotional ecosystem that supports autonomy, creativity, and long-term well-being.

Innovation is framed as a result of restoration rather than exhaustion.

OFFICE: MODUNEST

Circulation expands and compresses to support transitions between active collaboration and focused retreat. Variations in ceiling height, layered lighting, and natural materiality create sensory modulation throughout the day.

Extensive glazing maximizes daylight penetration, reinforcing circadian alignment and visual openness. Collaboration zones foster collective energy, while enclosed focus areas provide acoustic and visual privacy.

Through environmental responsiveness and spatial rhythm, ModuNest transforms the act of working into a fluid and human centred experience.

modunest

The Future of Workplace Design

This project expanded my understanding of workplace design beyond productivity, allowing me to explore how spatial environments can support well-being, autonomy, and creativity. I developed a stronger ability to design for emotional experience, using spatial rhythm, light, and materiality to influence how users feel and perform.

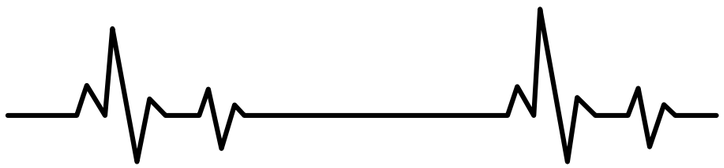

Hospitality: The Activity Alley

What if waiting became part of the healing experience?

The Activity Alley reimagines hospital waiting as an active, human-centered experience for pediatric patients, families, staff, and community members.

Through movement, play, connection, immersion, and rest, the design transforms traditional circulation space into a destination that supports emotional well-being and positive healthcare experiences.

Rather than a single waiting area, the Activity Alley creates a sequence of interconnected environments that offer choice, control, and engagement throughout the patient journey.

HOSPITALITY: THE ACTIVITY ALLEY

A sequence of spaces that transforms waiting into movement, connection, and care.

PRODUCT DESIGN: LUMI SYNC

Sync with the Sun. Live in Your Best Light.

Lumi Sync is a circadian-responsive luminaire designed to align interior lighting conditions with natural biological rhythms. A mechanically adjustable dome simulates the vertical movement of the sun, transitioning between 2000K warm light and 5000K daylight.

The form communicates movement through curvature and graduated value. A textured diffuser softens illumination, producing subtle dispersion while maintaining visual comfort. Engineered with a ninety plus CRI LED source and adjustable lumen output, Lumi Sync supports cognitive performance, emotional regulation, and wellness focused environments.

Technical Considerations Included:

- LED light source selection
- Adjustable lumen output (400–1000 lumens)
- 90+ CRI for natural colour accuracy
- Circadian rhythm support
- Mechanical vertical dome movement

Additional Design Considerations

- Glare mitigation through diffusion
- Wide beam angle for balanced distribution
- Energy-efficient LED technology
- Biophilic circadian integration
- Low heat output for safety
- User-responsive mechanical movement

Through this product, I deepened my understanding of how lighting design can directly impact human health and behaviour. I explored the relationship between form, movement, and circadian rhythm, strengthening my ability to integrate technical performance with conceptual clarity.

FURNITURE DESIGN: THE SOL SEAT

How can a single object restore rhythm within the workplace?

The Sol Seat reimagines workplace furniture as a restorative spatial intervention. Inspired by tidal movement, its continuous wave profile supports fluid transitions between focus and pause.

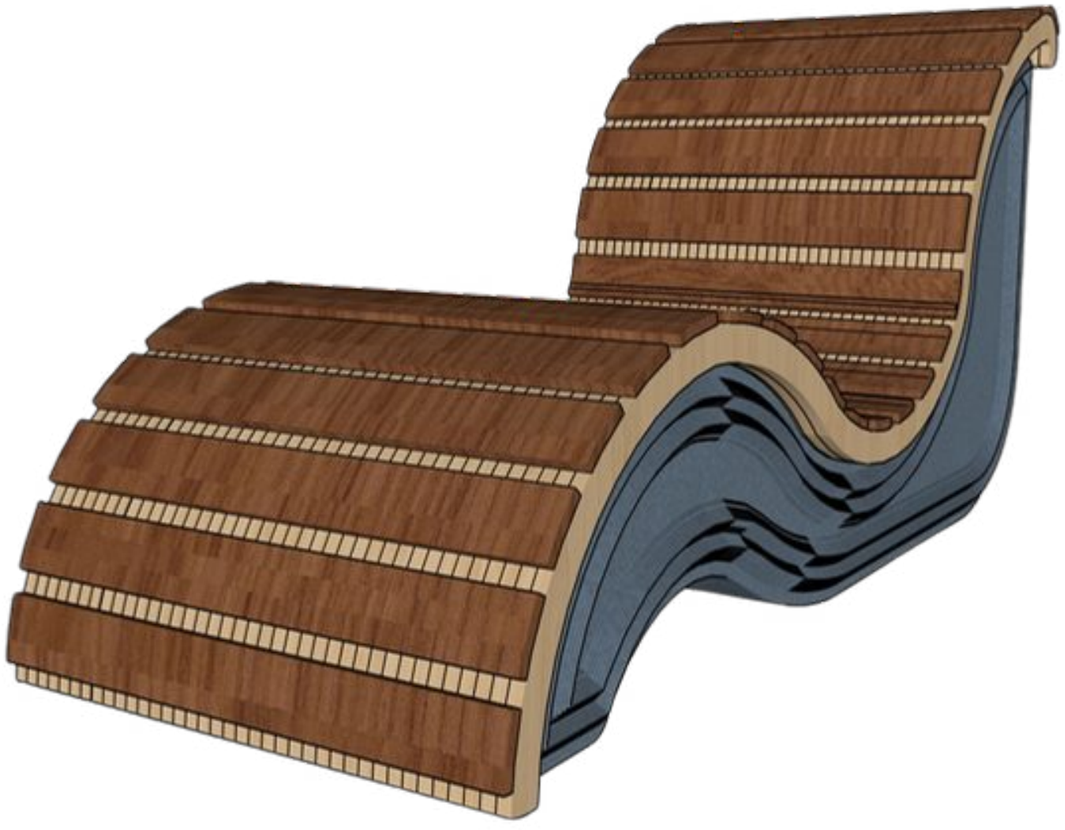

Layered materials reinforce the concept. Wood slats introduce warmth and structure, sand-toned trims soften edges, and a blue felt base grounds the form visually. Rooted in environmental psychology and Attention Restoration Theory, the Sol Seat supports autonomy, clarity, and emotional reset within collaborative environments.

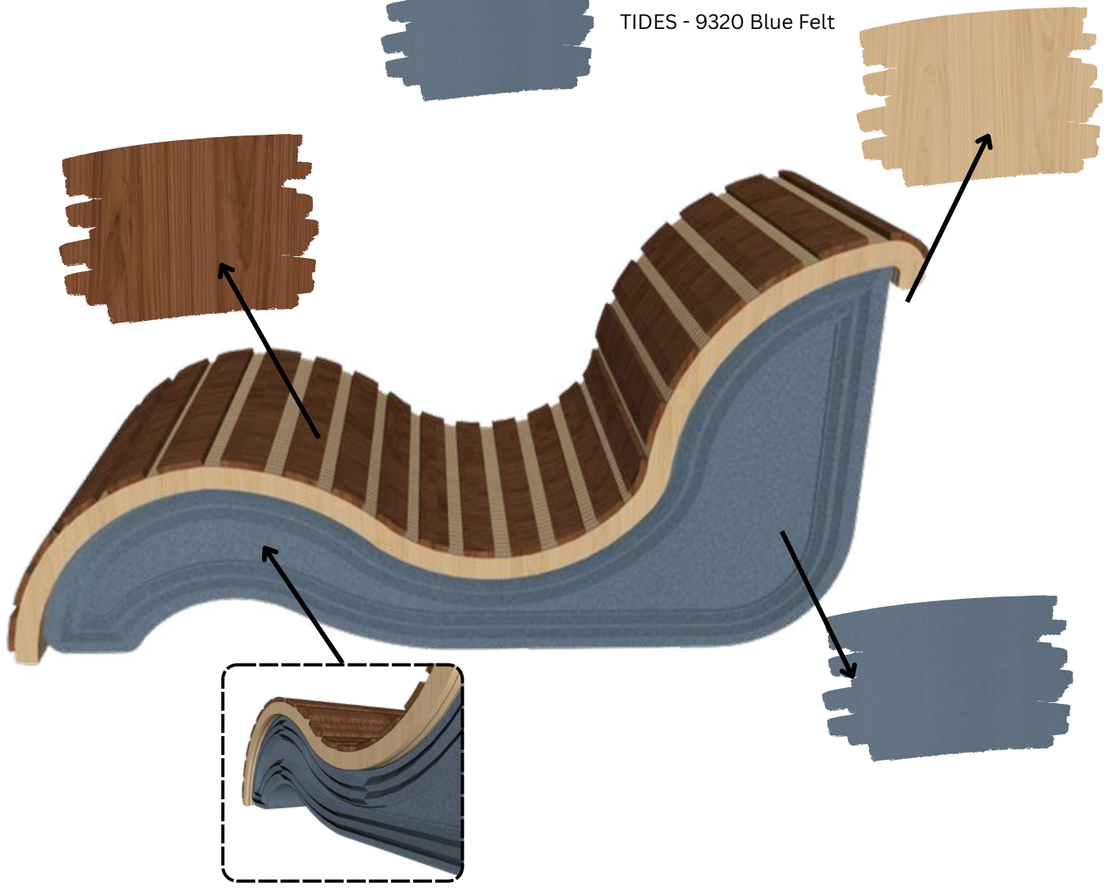

DOCK - 9042 Brun Refined Hickory

SAND - 9041 Natural Refined Hickory

TIDES - 9320 Blue Felt

This project allowed me to explore furniture as an extension of spatial experience. I focused on how form, material, and ergonomics can support moments of pause and restoration, reinforcing my interest in designing objects that contribute to emotional and cognitive well-being within larger environments.
